

Sarum Hydraulics reboots the two speed pressure test set.

For over 50 years, alloy two speed hand pumps have been the shop or site workhorse for pressure testing to 700 bar and above. We've taken the best features and brought them up to date on our MD series two speed hand pump. With a small space envelope, easy servicing and innovative design, this Micropac pump meets a market need. Featuring two speed manual change over for rapid pre-fill, models operate up to 1000 bar on multiple fluids including water, oil, glycol and 'Skydrol' phosphate ester. Available in low corrosion anodised alloy and stainless or a dedicated 316 option for ultimate durability. Versatile reservoirs or trollies for fixed and portable applications are available. Visit the experts at www.sarum-hydraulics.co.uk to learn more or contact John Foster on 01722 328388 to discuss your application.
