

## Trident Fluid Controls

### **Introducing a New Range of British Manufactured Miniature Hydraulic Valves**

Trident Fluid Controls has launched a new miniature range of British manufactured hydraulic valves delivering to the highest industry standard where the tightest tolerance is critical for superior performance, speed, control and repeatability.

TFC's Atom range of hydraulic and integrated circuits (HIC) are manufactured to customer's specific requirements, the unique design feature being the miniature slip over coils and the forces it achieves for its size. The range includes ATOM 3 and ATOM 4 sub miniature valves with flow rates of 0,1L/min to 15L/min (ATOM 3) and 5L/min to 20L/min (ATOM 4) from 0.5 to 350 Bar.

The Atom range consists of proportional and manually operated valves in CETOP and cartridge configuration with pressure relief, flow and directional control as standard.
